- To treat community growth and charity as a part of our job.

ii Services

1. Cloud Based Solutions – will help you bring in scalability, durability, reliability and accessibility in your business solutions. Most businesses globally are now moving their infrastructure onto the cloud which has brought in significant cost savings for them.
2. Custom Software Development – with solutions built around your needs, you can now control every aspect of your business, your way!
3. Mobile application development - ii provides development of mobile applications across all major platforms such as iOS, Android & Windows. We deliver enterprise mobility solutions that can help you get full visibility of your business anytime, anywhere.

ii Services

4. Automation and System Integration – brings synergy into the various systems implemented in a business environment. We offer solutions around automating data flow between varied systems and equip our client's with real time controls and reporting.
5. BizTalk Development – a Microsoft product which helps bridge independent systems by providing data transformations in a reliable and efficient way. We offer consultancy and bespoke solution development built around Microsoft BizTalk.

ii Solutions

1. ERP MANAGEMENT – short for Enterprise Resource Planning, is a combination of integrated applications that an enterprise can use to manage information and optimize processes to bring in operational efficiency.

ii Solutions

2. DAM – short for Digital Asset Management helps an organization centrally manage logos, documents, presentations etc. The assets can be characterized into three major groups that maybe defined as textual content(digital), images(media) and multimedia.
3. Inventory Management – Manage your inventory using a central repository and keep track of your stock movement. The software allows a business to increase order intake capacity while maintaining optimum stock levels with ease.
4. Project Management – Get an overall visibility of your project deliverables and order performance by using our template based project management solution. The solution allows stage level visibility of your projects with real time reporting.

Case Studies

Client: Store Twenty One

Store Twenty One is a UK based garment retailer with over 200 stores all across the country.

What was required?

- Optimization of their production life cycle.
- Control over suppliers spread across India, Bangladesh and China.
- Integration of all their global offices.

What we did?

- We delivered a solution which comprised of integrating Store Twenty One's legacy systems with custom-built Production Management software.
- Automated the process of synchronizing Purchase Orders across all sourcing offices.
- Monitored the supplier performance and sent out real time alerts whenever an order deviated from its original deadline/budget.

Case Studies

Client: Swastik Enterprises

Swastik Enterprises is a leading facilities management company with sites spread across the country.

What was required?

- As work grew, there was an urgent need to optimize the business processes to ensure smooth workflows and a happy customer.
- The issue they needed to resolve urgently was centralization of business wide data in order to optimize certain processes.

What we did?

We offered them a customized cloud based ERP solution in order to centrally manage their data and optimize processes around:

- HR (worker database and shifts management)
- Inventory Management
- Tender Management (with payment alerts)

Case Studies

Client: **Network1 Media Consultancy Pvt. Ltd.**

A media house which generates and supplies content to television broadcast networks, online and mobile companies.

What was required?

- Over time, and with increasing demand for their product, they started facing issues related to archiving of their raw and finished footage.
- There was an urgent need to effectively manage their ever growing data so that they could store and easily retrieve on-demand.

What we did?

- We developed a cloud based Digital Asset Management Solution
- which helps them securely archive and meta tag their digital data. Our solution
- helped them achieve a singular safe storage of their data with easy retrieval on-demand.

Case Studies

Client: US Based Client (WIP)

The client is a energy trading company based out of US and is primarily into selling natural gas and oil to its customers.

What was required?

- The client wanted to automate the process of sending out instructions to a gas pipeline company which otherwise is a manual and laborious process.
- There was also a need for getting real time MIS reports on how the overall business was performing.

What we did?

We offered them a customized cloud based EDI solution in order to centrally manage sending out of electronic instructions to a gas pipeline company and optimize processes around:

- Gas pipeline nominations (using EDI & Microsoft BizTalk)
- Enterprise Mobility (smartphone/tablet app)
- MIS reporting

What You Get?

- Strong scalable solution
- Business process automation
- Increased operational efficiency
- Real time visibility of all operations
- Early ROI
- On-demand MIS
- Enterprise mobility
- System integration
- 365/24/7 customer support
