PRODUTOS / MÁQUINAS

ITALCARRELLI® is a world leader in the design and manufacturing of specialty machines and solutions for the storage and handling of flat glass and it provides a wide range of machines for glass handling in the float glass production facilities. These machines perform the glass handling from the end of the line (stackers) to the warehouse and from the warehouse to the processing lines or to the shipping area. They can be customized in terms of loading capacity, equipment and accessories.

The main models of these machines are:

- > Platform transporters: machines suitable for the handling of glass on racks, mainly DLF / LES size.
- > Inloader transporters: machines suitable for the handling of glass on racks, mainly Jumbo size.
- > Multidirectional side-loaders: machines suitable for the handling of DLF / LES and Jumbo glass packs.
- > Special equipment for glass handling: Italcarrrelli also designs and produces equipment for the handling of sheets under special conditions.
- > Trucks for glass handling inside closed top containers: machines suitable for the handling of DLF / LES glass with and without packaging.

AGV is an innovative technology that transforms a machine, like a side loader or a self-propelled platform, into an automatic machine. Italcarrelli is able to transform all its machines into AGV machines with optical, laser, and inductive systems, developing also the software for the execution of automatic cycles, system configuration and interface with the system management.

HISTÓRIA DE EMPRESA

ITALCARRELLI®'s roots date back to 1962, when the entrepreneurial ability of Mr. A. Negrin identified the forklift as an essential product for industry. In 1969 the first electronic forklifts were built; it was an innovative product for the time, which marked a significant step forward for the company on the market, inasmuch as the demand for this type of forklift trucks exceeded the demand for diesel engine forklifts, within a very short time.

At the beginning of the 1980s, the first specialty machines, such as side-loading forklifts for the wood industry and lift platforms for heavy loads, were introduced marking a further important step forward in the company development.

The high level of reliability of these prototypes marked the beginning of a period of constant growth in demand in the field of special forklifts. In the same period, the company started expanding its market also beyond the national boundaries and began exporting front-loading forklifts in Europe and overseas.

From that period up to the present, Italcarrelli has continued to grow, developing more and more technological machines, with an important focus on the glass sector, to the point of creating the Italcarrelli Glass Division. Today, this important division is totally committed to the research, development and production of special machinery for the handling of flat glass.

The company is now a global player in the flat glass industry, thanks to the use of the most recent technologies - such as optical and ultra-sound sensors, touchscreen and dedicated software developed by Italcarrelli - and to important investments allowing Italcarrelli to develop machines without operators on board - AGV machines - ever more requested by today's market and of course Industry 4.0.
