PRODUTOS / MÁQUINAS

FinnSonic Oy develops and manufactures ultrasonic cleaning systems for demanding parts cleaning applications. The company's customers in the glass container and table ware industries benefit from FinnSonic's mould cleaning technology, which replaces the conventional mechanical mould cleaning. Cost savings can be achieved because

Energy consumption compared to running a sand blaster is much lower

Manual handling of heavy mould parts is widely eliminated leading to reduced labour cost and safer work environment

More production cycles per mould as no abrasive media is used

Quality of end product is improved with less rejects

Savings in glass mass consumption as moulds remain in their original tolerances

FinnSonic provides full global service including test cleaning, equipment specification, process chemicals, installation and commissioning, remote support, and after sales service.

HISTÓRIA DE EMPRESA

Founded in 1978, **FinnSonic Oy** has grown to the largest manufacturer of precision cleaning equipment in Scandinavia. Profound understanding of customers' specific cleaning requirements has enabled the company to

develop intelligent cleaning solutions to several industry branches including the global hollow glass and table ware industries.

FinnSonic's design, development and production is concentrated in Lahti, Finland where the company operates in own factory premises. Project sales from the factory is supported by global network of sales and service partners.

Company Profile of **FinnSonic Oy**
